

Debriefing

The purpose of this study was to create and validate a new questionnaire measuring interoception. Interoception involves being aware of changes happening inside our bodies, both physiological (e.g., our heart rate) and emotional, and it plays a crucial role in how we perceive and experience the world around us. It has been related to emotion regulation, self-awareness and overall mental well-being.

Thank you again! Your participation in this study will be kept completely confidential. If you have any questions or concerns about the project, please contact D.Makowski@sussex.ac.uk. and/or A.Neves@Sussex.ac.uk
